

Attachment For Blade Of Hockey Stick

Abstract Of The Disclosure

An attachment for a blade of a playing stick such as a
hockey stick. The attachment includes a floor portion with
5 a leading edge that digs under an object to be flung by the
stick. The attachment includes a base portion that engages
the blade. The floor portion may be flexed between an L-
shaped position and a V-shaped position, relative to the
base portion or blade. The attachment may include a finger
10 for engaging the heel end of the blade, ceiling portion, a
seat on the floor portion, an undulating leading edge, a
slot for being engaged by a tether that wraps about the
blade, and a base portion that is curved for a curved blade.

An attachment having the blade itself is further disclosed,
15 where a heel end of the attachment engages the blunt distal
end of a stick, and where the attachment further includes a
floor portion on the blade, with the floor portion having a
leading edge for digging under an object. A playing stick
is further disclosed, where the playing stick includes a
20 blade and a floor portion on the blade, with the floor
portion having a leading edge for digging under an object.
